

Pre -Installation check list

Until the following guidelines have been met, the jobsite is not ready for a wood flooring installation. Please initial, or complete, line next to each item that guideline has been met and verified.

— All wet trades (drywall, plaster, paint, ceramic tile, etc.) have completed their work.

Signature Of Jobsite Superintendent

Interior Conditions

 Air conditioning, heating and ventilation are complete and operating. The building is enclosed and weather-tight, including all doors and windows in place. The temperature and relative humidity within the structure are at "normal living conditions"—that is, temperature is between 60 and 80 degrees Fahrenheit and between 30 and 40 % relative humidity. Six-mil polyethylene has been installed and covers the entire ground area in the crawl space.
Moisture Conditions
 Moisture content of the wood subfloor is no more than 4 percentage points above or below the finish flooring and is within regional moisture content guidelines. Moisture testing of concrete slab began no sooner than 30 days after the slab was poured. Test results indicate that it is safe for wood flooring installation to begin. What type of test was used? What were the test result?
Exterior Conditions
 Gutters and downspouts are properly placed to drain water away from the structure. Soil surrounding the structure is graded properly to drain water away from the site.
Concrete Slab Conditions
 Concrete has been installed for at least 30 days. If wood flooring is to be installed over slab, the concrete is flat per specifications. A vapor barrier has been installed under the slab. Verified by:
Delivery and Working Conditions
 Proper electrical power is available (120 V or 220 V) Driveway and sidewalks are paved
I verify that the jobsite is ready for wood flooring installation.
